***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to generating and processing a difference image, classified in class 382, subclass 130.
- II. Claims 13-26, drawn to deciding and performing gradient processing for computing a difference image, classified in class 382, subclass 128.

The inventions are independent or distinct, each from the other because:

Inventions I and II are directed to related image processing methods. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have different modes of operation. For example, group I generates and stores a difference image, decides a reference difference value, selects a state of shadow change, and processes the difference image. Furthermore, group II decides a gradient processing, performs a gradient processing, and computes a difference image from the gradient processing. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.
